

Algebra 1 with Probability

Required Course Materials

Graphing Calculator

Students need a graphing calculator. The models used for in-class demonstration are the TI-83 and TI-84 brands. This calculator will continue to be used in every math course following Algebra 1. Students may purchase other brands (such as the Casio models), but if using a calculator *other* than what is used in class, they should be prepared to research how to use the calculator on their own.
